can be used in vaccines to protect birds and animals against intestinal diseases, esp. to protect pigs against porcine proliferative enteropathy. It is the expression product of a DNA molecule (AAT69201) obtd. by screening an L. intracellularis library with rabbit anti-L. intracellularis sera. GroEL, GroES (AAW16679) and other L. intracellularis polypeptides (AAW16680-85) can be administered as recombinant polypeptides or expressed as Accombinant vaccines utilising bacterial, fungal or viral vectors. Antibodies raised against the polypeptides may be useful in immunotherapy, diagnosis of infection and detection.
                                                                                                                                             The GroEL heat shock protein (AAW16678) of Lawsonia intracellularis

describes Streptococcal Hsps, designated Hsp60. These proteins, their fragments, variants and fusion proteins, are used to elicit or enhance an immune response against Streptococcus, and to elicit a similar response to a target antigen fused to the protein. Unlike other immunological carriers, Hsp60 proteins are not immunosuppressive so provide an increased response to any conjugated or fused antigen. Also, where used for cancer control, they lack the side effects associated where used for cancer control, they lack the side effects associated where used for cancer control, they lack the side effects associated with endocoxins. They can also be used to detect specific antibodies and in treatment or prevention of tumours (e.g. sarcoma or cancers of pracast, ovary, prostate, lung, pancreas or liver). The Hsp60 protein is source of primers and probes for detecting streptococci in standard hybridization/amplification assays, and therapeutically in gene EDRGIKLENVSLSSLGTAKRVVIDKENTTIVDGAGKSEDIKARVKQIRAQIEETSSDYDR 362 EDKFENMGAQMVKEVAPKTSDIAGDGTTTATVLAQAIYREGVKLVAAGRNPMAIKRGIDK 122 AVVAVTKELSDITKPTRDQKEIAQVGTISANSDTTIGNIIAEAMAKVGKGGVITVEEAKG 182 122 AVDAVVEELKATAKPVETKEEIAQVATISANGDEEIGELIAEAMEKVGKEGVITVEEGKT 3 SKEILFDAKAREKLSRGVDKLANAVKVTLGPKGRNVVIEKSFGSPVITKDGVSVAKEIEL 183 LETTLDVVEGMKFDRGYLSPYFVTNPEKMVCELDNPYILCNEKKITSMKDMLPILEQVAK 243 VNRPLLIIAEDVEGEALATLVVNKLRGALQVVAVKAPGFGERRKAMLEDIAILTGGEAIF Gaps 7; DB 20; Length 85; Indels Score 1864.5; DB 20 Pred. The specification describes Streptococcal Hsps, designated Hsp60. These proteins, their fragments, variants and fusion proteins, are used to elicit or enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      an immune response against Exceptococcus, and to elicit a similar response to a target antigen fused to the protein. Unlike other immunological carriers, Hsp60 proteins are not immunosuppressive so provide an increased response to any conjugated or fused antigen. Also where used for cancer control, they lack the side effects associated with endotoxins. They can also be used to detect specific antibodies and in treatment or prevention of tumours (e.g. sarcoma or cancers of breast, ovary, prostate, lung, pancreas or liver). The Hsp60 polynucleotide is used for recombinant production of the protein, as a source of primers and probes for detecting streptococci in standard hybridization/amplification assays, and therapeutically in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nucleic acid encoding heat shock protein-60 from Streptococcus, ul in vaccines, as carriers for other immunogens, as anticancer

                                                                                                                                                                                                                                                                                                                                                                         09
                                                                                                                                                         inducing an immune response against P. aeruginosa infection. An agent capable of antagonising, inhibiting or otherwise interfering with the function or expression of Pl are useful in the manufacture of a medicament for the treatment or prophylaxis of P. aeruginosa infections. The present sequence represents a specifically claimed P. aeruginosa groEL protein sequence from the present invention.
 P. aeruginosa infections and for producing vaccines

The P. aeruginosa proteins have antibacterial activity and can be used in vaccines and as antagonists. The proteins or their fragments, or antibodies are useful in the detection and/or diagnosis of P. aeruginosa. They are also useful for producing a vaccine and

                                                                                                                                            AAV23905-30 represent heat shock proteins (Hsps). The specification describes Streptococcal Hsps, designated Hsp60. These proteins, their fragments, variants and fusion proteins, are used to elicit or enhance

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes antigenic Pseudomonas aeruginosa proteins (PI). The P. aeruginosa proteins have antibacterial activity and can be used in vaccines and as antagonists. The proteins or their fragments, or antibodies are useful in the detection and/or diagnosis of P. aeruginosa. They are also useful for producing a vaccine and inducing an immune response against P. aeruginosa infection. An agent capable of antagonising, inhibiting or otherwise interfering with the

an immune response against Streptococcus, and to elicit a similar response to a target antigen fused to the protein. Unlike other immunological carriers, Hsp60 proteins are not immunosuppressive so provide an increased response to any conjugated or fused antigen. Also, where used for cancer control, they lack the side effects associated with endotoxins. They can also be used to detect specific antibodies and in treatment or prevention of tumours (e.g. sarcona or cancers of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 ELEDKFENMGAQMVKEVAPKTSDIAGDGTTTATVLAQAIYREGVKLVAAGRNPMAIKRGI

Neisseria meningitidis.

W09957280-A2

Novel Neisserial polypeptides predicted to be useful antigens for vaccines and diagnostics

Claim 2; Page 1388; 1453pp; English.

```
represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypoptides. AAE54577 to AAE5455, and AAE4653 to AAE54591 belower polypoptides. AAE54577 to AAE54576 and AAE54613 represent polypoptides. AAE54573 to AAE54576 and AAE54613 represent primers used in the exemplification of the present invention. The polypoptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also he used to screen for agonists or attagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DKAVAALVEELKNIAKPCDTSKEIAQVGSISANSDEQVGAIIAEAMEKVGKEGVITVEDG 180

Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae lineticion, this may be in the form of a vaccine or gene therapy. Sequences given in records ABPR1046 represent nucleic acid molecules of the invention.

component of an heat shock protein 60 (hsp60) obtainable from Francisella tularensis, and in particular the GroEL protein or its fragment, and a nucleic acid sequence encoding the polypeptide. The polypeptide and polynucleotides of the invention are useful for preparing a medicament and for preventing or treating infection caused by F. tularensis in an animal. The polynucleotide of the invention is administered to an animal in a form in which it is expressed in situ. The present sequence is Francisella tularensis

polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antiboacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.

The invention encompasses a detrimental organism-resistant plant producing the protein of the invention in an effective amount for controlling detrimental organisms. A composition of the invention is useful for the preparation of a detrimental organism controller. The current sequence represents a detrimental organism controller protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a 60 kDa protein of Campylobacter jejuni. The protein is antigenic, and is visible on a Western blot of c. jejuni protein after incubation of the blot with antibodies against a flagellaless mutant of c. jejuni but not visible after incubation with antibodies against wild type C. jejuni. The proteins are used to produce vaccines which are useful for protecting animals, especially poultry, against Campylobacter, especially C. jejuni.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Campylobacter antigenic proteins, useful for the production of nes for protecting poultry form Campylobacter infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Amino acid sequence of a 60 kDa protein from Campylobacter jejuni.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nuijten PJM;

This sequence represents the E. coli chaperone protein GroEL which can be used for treating diseases associated with protein/polypeptide structure, e.g. Alzheimer's disease. The sequence can also be used for reconditioning molecules, especially a protein that has previously been inactivated or denatured, or more generally for altering the structure of a molecule by unfolding or refolding. The sequence also has applications for purification procedures and can increase yield, specific activity or quality of biological molecules, especially by co-expression with the molecules. Therapeutic agents are administered orally, by injection or intranasally, or from a slow-release formulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         241 AKAGKPLIIJAEDVEGEALATLVVNTWRGIVKVAAVKAPGFGDRRKAMLQDIATLTGGTV

The invention provides a method of providing chaperone activity in vivo, by administering to a cell a fragment of a molecular chaperone which has in vivo activity. Also provided is a method of determining whether a fragment of a molecular chaperone is active in vivo by: (i) providing a cell with a deficient molecular chaperone activity; (ii) administering the fragment to the cell; and (iii) determining whether the fragment complements the deficient endogenous molecular chaperone. The method can determine which fragments of the molecular chaperone can be used to complement a mutant or deficient molecular chaperone in vivo. The method allows an in vivo assessment of chaperone activity as compared to previous tests which only measured activity in vitro.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for, e.g. complementing a molecular chaperone defect in vivo
